

Blankenburger Süden

An interactive analysis tool for evaluating design proposals and report summaries of urban development concepts.

Project Type: A tool for an urban development office

Location: Berlin, Germany

Position: Consultant and Tool developer

Employer: DecodingSpaces GbR

Client: TSPA

Time: 2019

Contribution: Tool Design, Programming, Coordinating, Training

Tools: C#, R, Grashopper, Rhino, QGIS, Google API

Building a masterplan desing aiding tool to help the urban planner developing a statagic design process. The step taken are; first, the urban design team define the typologies and parcellation method for the whole district in a workshop. Second, the tool provides and analysis output for the internal street network using space syntax analysis methods developed by the team of DecodingSpace. Third, the client manipulate the parameters of the density and the tool suggest the tram station location based on the Floor Area Ratio of the proposed configuration. Finally, the tool provides a report for the area usage for each proposal using Google API to send the value to a common excel sheet for the rest of the team.
